Skills

- Front-end: JavaScript, TypeScript, React (with Hooks), Jquery, Redux, Webpack.
- Back-end: node.js, express, firebase, No-SQL databases (MongoDB).
- Analytical skills: This involves ensuring the coding is correct so the website is functional.You'll need to analyze their wants and needs and be ready to adapt to any changes they'd like to see implemented on the website.
- Responsive design skills: Your ability to create a responsive design can also impact the number of visitors a website gets since most people are deterred from a website when it's not displaying properly.
- Testing and debugging skills: As a web developer, it's important to know how to continuously test your webpage for any possible errors. Should any arise, you should also know how to debug it.
- Tools: Work with a number of tools to help developers in the product design process: Sass, VsCode, Webpack, Babel ...
- GIT (Code Versioning) : Code versioning or version control enables you to track and control, but also revise any changes to your programming code.
